Survey Methodology

This survey was conducted by live dialing landline and cell phone sample, as well as, conducting online interviews. The online interviews were collected using Dynata online panel. The survey response data was slightly weighted based upon Colorado population demographics from the United States Census. The interviews were conducted on April 15th – 21st, 2020. Three attempts were made to interview each household in the sample. This survey has a margin of error of +/- 3.10% at the 95 percent confidence interval. The oversample of African Americans has a margin of error of +/- 8.28%.
